Final scorecard

Generated 6/23/2026, 4:40:50 PM

AI-generated recommendations are advisory. A qualified human reviewer must make the final hiring decision.

RESUME 85%	INTERVIEW 88%	SOFT SKILL 10%	OVERALL FIT 86%	RISK LEVEL Moderate
---------------	------------------	-------------------	--------------------	------------------------

Candidate fit narrative

Strong technical foundation in FastAPI, PostgreSQL, and background job processing. Demonstrated production observability and team collaboration. Missing details on FastAPI versioning and specific observability tools.

Recommendation

Recommend human review to clarify FastAPI versioning, error-handling, and specific observability tooling implementation.

Evidence summary

```
{
  "resume": [
    "Designed FastAPI APIs for account provisioning",
    "Implemented structured logging and alerts for failed payments",
    "Migrated background jobs from cron to a queue worker with retries and idempotency keys"
  ],
  "interview": [
    "Designed PostgreSQL schema with indexes on account_id and status, including partial index for active provisioning jobs",
    "Implemented Redis-backed background job queue with retry limits and dead-letter handling",
    "Collaborated with product and frontend teams on API contracts and error response adjustments"
  ]
}
```

Missing evidence

No specific details on FastAPI versioning or error-handling strategies in scaling a 10K concurrent request scenario

No mention of specific observability tools (e.g., Prometheus, Sentry) beyond structured logs and alerts

Confidence: 82%
